Definition of Done

A task is completed when:

- The acceptance criteria have been met.
- When the code has been reviewed by at least one other team member.
- The code is commented if need be
- The functionality has been tested by at least one team member for correctness.

A user story is completed when:

- All the associated tasks are completed.
- The feature is properly integrated into the whole application.
- The associated code is pushed to GitHub.
- The user story has been tested by at least one member for correctness and functional completeness.
- It satisfies the set requirements by the Product Owner

A Sprint is completed when:

- All the user stories associated with this sprint are completed.
- The entire code base has been reviewed by at least one other team member.
- All branches have been merged with master.
- All merged branches have been deleted.
- All features have been tested for correctness and fault tolerance.

A product is deemed shippable when:

- There are no partially implemented or non-functional elements still visible in the application.
- It meets the user story requirements.
- Each feature has been tested at least once for correctness and fault tolerance.
- All licenses are properly documented.
- The interoperability of each feature has been tested for correctness
